

Training project on Maternal and Child health service with digital technology

1. To meet the growing medical needs of the middle class, cost-effective digital antenatal examination solution can help improve the quality of health care.
2. Knowledge on digital solution is transferred from Health and Tec , a Japanese company, and prenatal control technology is transferred by specialists from IGPC (NGO). The participants are medical personnel from governmental medical institutions and employees (doctors, nurses) of SOIK sarl in order to improve the quality of maternal healthcare service.
3. 30 participants will be trained and 9 health centers will conduct On The Job Training of the digital solution by the end of 2022. The dissemination of this solution as private business would promote the Japanese brand in healthcare and sales on Japanese portable medical equipment in Africa
