

## Project to Strengthen Mammography in the Arab Republic of Egypt

- In Egypt, breast cancer is the most common cancer among women. Breast cancer accounts for 16.4% of the total cancer incidence in Egypt, and 32.4% in women alone. The purpose of this project is to provide technical support of mammography for Cairo University Hp.
- In coronavirus crisis, online technical trainings will be provided. After the crisis, in-person lessons for Cairo University Hp will be conducted.
- It is expected that radiological technologists at the hospitals will achieve a 90% comprehension rate of Japanese-style examination procedures.
