

Strengthening clinical skill of cybernics treatment for pediatric rehabilitation in APAC(8 countries),and training of qualified specialists

Date: April 25, 2023

Background

In eight APAC countries, including Malaysia, the number of children with congenital disabilities such as cerebral palsy and children with acquired disabilities due to encephalitis, encephalopathy, brain trauma, cerebrovascular disease, spinal cord injury, etc. is increasing. There are voices from various countries requesting the use of HAL.

HAL treatment for cerebral palsy patients

Outline of training

1. Conduct clinical skill enhancement training in the field of pediatric rehabilitation.
2. Training of qualified personnel (master trainers) who can teach Cyberdyne's HAL treatment
3. Implementation of lectures by university hospitals in Japan

Cerebral Palsy Support NGO

Expected outcome

1. Awareness of the need for rehabilitation for patients with cerebral palsy will increase in eight countries, including Malaysia.
2. In the future, it is hoped that the social system will include not only rehabilitation but also various types of compensation for the family and the patient.

<Training schedule>

1. SEPTEMBER: Online training
2. October: Clinical Skills Enhancement Training (1)
3. End of November - early December: Training in Japan (2)
4. January: Follow-up training
