

## Medical Engineering human resource development project in Tanzania

Creation date: April 14, 2023

- ① There are no human in Tanzania who can properly handle medical equipment. This leads to a decline in the quality of medical care.
- ② Clinical Engineers who are experts in medical equipment are trained at university in Tanzania and placed in hospitals. In addition, medical equipment training will be provided to medical personnel to improve the quality of medical care. And we will mature the foundation for the spread of Japanese medical equipment in Tanzania.
- ③ The general incorporated association Clinical Engineering Global Promotion Foundation(CEGPF) is an organization promoting the internationalization of clinical engineers. The CEGPS will provided operational cooperation and dispatch experts for ME human resource development to the National University of Dodoma in Tanzania.
- ④ In October 2023, a new ME department will be established at the National University of Dodoma, and ME human resource development will being. IN addition, we will establish a qualification system and job descriptions by 2025 and start preparations for hiring at hospitals.
