

Training of gastroenterologists for the reduction of gastric cancer death in Lao PDR 作成日：令和5年5月11日

1. Current situation : In Laos, the cure rate of gastric cancer is low. The reasons are 1.lack of ability to find early gastric cancer and 2.the absence of measure of the prevention (eradication of helicobacter pylori) 。
2. Final purpose: To reduce gastric cancer death in Laos by training of doctors as gastroenterologist.
3. Overview : Our organization conducts the training of gastroenterologists (endoscopist from 3 major hospital in Laos; Mittaphab, Mahosoto, Sethathirath hospital) together with professor Yao at Fukuoka University Chikushi hospital. Moreover, collaborate with Oita University for the analysis of Helicobacter pylori.
4. Expected achievement ; Selected doctors in Laos acquire the technique for the endoscopy and able to find the early gastric cancer to cure the patients. In addition, they can also learn about Helicobacter pylori for the prevention of gastric cancer. The whole plan is 3 years.

<Training plan>

July deligate Japanese specialist (2)

- Basic technique of upper GI endoscopy
- Risk management of gastroscop

Sep deligate Japanese specialist (2)

- Screening method of endoscopy for finding early stage of gastric cancer

Oct deligate Japanese specialist (2)

- H pylori teaching

Nov Trainee In Japan (5)

- Endoscopy Technique (Fukuoka Univ.)
- H. pylori analysis (Oita Univ)

Jan, On line conference (20)

- online learning about gastric cancer
