

Endoscopic Diagnosis/Surgery and Laparoscopic Surgery Training Course in Brazil

- Incidence of Neoplasms in Brazil have doubled from 1990 to 2017, Colon and Stomach cancers are in 2nd and the 3rd in the list. Although endoscopy is use in the clinical practice, the procedures are not systematic nor standardized, consequently lead to underdiagnosis.
- Most advanced endoscopic and laparoscopic technique nurtured in Japan will be taught via online to the physicians and surgeons in Pantanal, with the help of our counterpart Universidade Federal Mato Grosso do Sul.
- Major goal of this project is to cure rate of gastrointestinal cancers in the Pantanal, and QOL maintenance through the increased number of minimum invasive surgery
