

Project to develop Oncology surgery team for Gastrointestinal Cancer in Myanmar

- In Myanmar, The number of physicians is still small and oncology surgical teams with collaboration between physicians and nurses for perioperative management are not in place.
- The quality of endoscopy/laparoscopic surgery and medical device are Japanese medical strengths. Providing medical devices, dispatching specialists, and doing online training, we provide training opportunities and lectures on team medicine, endoscopy, and laparoscopy.
- With this project, the development of oncology surgical teams, the popularization of endoscopic/laparoscopic technique, and development of the mortality rate of digestive cancer.
