

Project for enhancement of diagnostic skills for prenatal ultrasound among Myanmar Obstetricians

- Although almost all of secondary and tertiary hospitals in Myanmar has ultrasound instruments, few OB/GY doctors can fully use them and accurate ultrasound diagnosis can hardly be made.
- In Japan, ultrasound instruments are widely distributed in a medical setting. A number of OB/GY doctors can make ultrasound diagnoses by themselves. We plan to accept OB/GY trainees from four medical university in Myanmar and train them to obtain enough skill for ultrasound diagnosis. After their training in Japan, dissemination seminar of ultrasound diagnosis will be held in Myanmar.
- This project will lead to an increase in OB/GY doctors who have enough skill for ultrasound diagnosis. Then they can diffuse skill and knowledge of ultrasound diagnosis to other OB/GY doctors in district hospital.

<Schedule>

Jul/2020 and Oct/2020:

~~reception of two trainees in total~~

~~→ Every period is 12 weeks.~~

~~→ Practical training on OB/GY ultrasound (especially on perinatal and fetal diagnosis)~~

Jan/2021:

~~dispatching experts to Myanmar~~

~~→ Dissemination seminar of ultrasound diagnosis will be held.~~

From Oct/2020 to Nov/2020: production of video for instructing trainee and dissemination seminar

From Dec/2020 to Jan/2021: training fetal ultrasonography by viewing the video and evaluation of trainees' competencies by uploaded videos from trainees

Feb/2021: dissemination seminar will be held remotely.
