

Establishment of medical radiation safety management system and support for radiological technologist training in Myanmar

- In Myanmar, seminars and workshops have been held every year by the Japanese Society of Radiological Technology (JSRT) since 2017, cooperating with Myanmar Society of Medical Radiation Technologists (MSMRT). Ministry of health and lecturer of university in Myanmar request to continue the project.
- JSRT, as a professional group for medical radiation, attempt the project to try the online training and technical guidance using E-learning contents with ICT environment. The project enable the education/technical support under the difficult situation of on site education.
- Suggesting the education system by installing local resources, instead of transferring Japanese model, it can reduce financial burden accompanied with facility investment and, develop the sustainable support by relaxing temporal and physical restriction using ICT.
